

## Recommandation | Feedback by Vicky\_Das

1. When the user switches from Dashboard page to My profile page, the user-name on the top right corner changes from Full name to Username. It will create bad experience.
2. Profile photo update Issue: Even after uploading profile photo, It does not reflects.
3. There are Irregularity of text issue in events cards, In some cards the text is (OFFLINE, ONLINE) where as in few it is (Offline, Online), it is not uniform accross every card.
4. Adding an Eye button to Confirm Password will add value to the user experience.

### 5. SEVERE SECURITY FLAWS IN SIGNUP FORM

**i. Email Field – Malicious user can remove can remove the type as email and the pattern, and they can get away with that, system will create an account regardless.**

**e.g email – akjdfjljaajd & email [aklldjif@galj.com](mailto:aklldjif@galj.com) is treated as same.**

```
<label class="font-weight-semibold" for="email">Email:</label>
<input type="email" class="form-control input" id="email" name=
"email" value placeholder="eg: abc@xyz.com" pattern="^\S+@([a-
zA-Z0-9]{2,61}?\.)+[a-zA-Z]{2,6})$" maxlength="50"
required> == $0
```

**2. Password Field – Peoples can play with the password minlength and maxlength and they can create password with even “a” which is a single character.**

```
</label>
<input type="password" minlength="8" maxlength="16" class="form
-control input" id="password" name="password" placeholder="Pass
word" required autocomplete="true"> == $0
▶<div class="text-danger small mt-1 ml-1" style="display: none;"
```
